

mini-ndn - Bug #5160

Can't run NDN applications on mixed topologies

05/11/2021 06:35 PM - Alexander Lane

Status:	In Progress	Start date:	05/11/2021
Priority:	Normal	Due date:

Target version:			
Description			
When using Mini-NDN-Wifi, there is often a desire to build topologies consisting of a mix of wireless and wired nodes to simulate more complex scenarios. Presently, using Mini-NDN-Wifi, the expected environment variables needed to run NFD are not present, which forces a need for workarounds in scripts. This can be fairly easily resolved with basic refactoring.
